

annotating the representation of the search result target resource based on the linguistic analysis to indicate at least one logical section of the search result target resource includes an element that satisfies the at least one search criterion.

**23.** The computer program product of claim 22 wherein the representation of the search result target resource includes a thumbnail image of the search result target resource.

**24.** The computer program product of claim 22 wherein the search result target resource includes a Web page.

**25.** The computer program product of claim 22 wherein the resource search includes a Web search performed by a Web search engine.

**26.** The computer program product of claim 22 wherein an element that satisfies the at least one search criterion constitutes a hit and the annotating operation comprises:

determining an existence of at least one hit in the at least one logical section; and

inserting, into the representation of the search result target resource, at least one annotation indicating the existence of the at least one hit in the at least one logical section.

**27.** The computer program product of claim 22 wherein the annotating operation comprises:

determining a location of at least one hit within the at least one logical section; and

inserting, the representation of the search result target resource, at least one annotation indicating the location of the at least one hit in the at least one logical section.

**28.** The computer program product of claim 22 wherein an element that satisfies the at least one search criterion constitutes a hit and the annotating operation comprises:

determining a number of one or more hits contained in the at least one logical section; and

inserting, the representation of the search result target resource, at least one annotation indicating the number of one or more hits contained in the at least one logical section.

**29.** The computer program product of claim 22 wherein the computer process further comprises:

caching results of the layout analysis and the linguistic analysis for use by the annotating operation.

**30.** The computer program product of claim 22 wherein the computer process further comprises:

caching the search result target resource that includes the at least one logical section.

**31.** The computer program product of claim 22 wherein the computer process further comprises:

caching the representation of the search result target resource.

**32.** The computer program product of claim 22 wherein the computer process further comprises:

caching search statistics for the search result target resource relating to the resource search.

**33.** The computer program product of claim 22 wherein the computer process further comprises:

generating a thumbnail image of a search results page that includes at least one search result referencing the at least one search result target resource; and

annotating the thumbnail image of the search results page to indicate a relative strength of the at least one search result.

**34.** The computer program product of claim 22 wherein the computer process further comprises:

receiving a selection of an annotated logical section defined in the representation of the search result target resource;

extracting resource data corresponding to the annotated logical section from the search result target resource;

annotating the resource data corresponding to the annotated logical section to highlight an element satisfying the at least one search criterion.

**35.** The computer program product of claim 34 wherein the computer process further comprises:

reformatting the resource data corresponding to the annotated logical section for display on an incompatible display.

**36.** The computer program product of claim 22 wherein the resource search includes a search through cached data from a previous resource search.

**37.** The computer program product of claim 36 wherein an element that satisfies the at least one search criterion constitutes a hit, the cached data includes at least one search result target page, and further comprising:

annotating a logical section of the search result target page to indicate that the logical section contains the most hits for display in a detailed view mode.

**38.** The computer program product of claim 22 wherein the computer process further comprises:

creating a searchable inverted index from the linguistic analysis of content elements of the search result target resource.

**39.** The computer program product of claim 22 wherein the computer process further comprises:

performing statistical analysis of the search result target resource; and

creating a searchable inverted index from the statistical analysis of content elements of the search result target resource.

**40.** The computer program product of claim 22 wherein the computer process further comprises:

performing statistical analysis of the search result target resource; and

caching results of the layout analysis and the statistical analysis for use by the annotation operation.

**41.** The computer program product of claim 22 wherein the computer process further comprises:

creating a searchable inverted index from the linguistic analysis of content elements of the search result target resource; and

associating at least a portion of the searchable inverted index with a logical section of the search result target resource.
